## WHAT IS CLAIMED IS:

1. An image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message, the image data communication apparatus comprising:

a panel section configured to input a mail address of a user to the image data communication apparatus; and

a controller configured to set the mail address of the user, input by the panel section, into the mail message of the e-mail to which the image data is attached, whereby the mail address of the user set into the mail message of the e-mail can be utilized as a destination of a reply to the e-mail, the reply being sent from the receiving apparatus.

- 2. The image data communication apparatus according to claim 1, wherein the image data source comprises a scanner connected to the image data communication apparatus.
- 3. The image data communication apparatus according to claim 1, wherein the panel section comprises a personal computer connected to the image data communication apparatus.
- 4. The image data communication apparatus according to claim 3, wherein the personal computer displays an HTML document for inputting the mail address of the user to the image data communication apparatus.
- 5. The image data communication apparatus according to claim 1, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
- 6. An image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a

receiving apparatus via the network, the e-mail including a mail from command and a mail message, the image data communication apparatus comprising:

a panel section configured to input a mail address of a user to the image data communication apparatus; and

a controller configured to set the mail address of the user, input by the panel section, into the mail message of the e-mail to which the image data is attached, whereby a replay to the e-mail can be sent to the user without requiring input of the mail address of the user at the receiving apparatus, the reply being sent from the receiving apparatus.

- 7. The image data communication apparatus according to claim 6, wherein the image data source comprises a scanner connected to the image data communication apparatus.
- 8. The image data communication apparatus according to claim 6, wherein the panel section comprises a personal computer connected to the image data communication apparatus.
- 9. The image data communication apparatus according to claim 8, wherein the personal computer displays an HTML document for inputting the mail address of the user to the image data communication apparatus.
- 10. The image data communication apparatus according to claim 6, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
- 11. An image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message, the image data communication apparatus comprising:

a panel section configured to input a mail address of a user to the image data communication apparatus; and

a controller configured to set the mail address of the user, input by the panel section, into the mail message of the e-mail to which the image data is attached, whereby a reply to the e-mail is returned to the mail address of the user.

- 12. The image data communication apparatus according to claim 11, wherein the image data source comprises a scanner connected to the image data communication apparatus.
- 13. The image data communication apparatus according to claim 11, wherein the panel section comprises a personal computer connected to the image data communication apparatus.
- 14. The image data communication apparatus according to claim 13, wherein the personal computer displays an HTML document for inputting the mail address of the user to the image data communication apparatus.
- 15. The image data communication apparatus according to claim 11, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
- 16. An image data communication apparatus connected to a network, the image data communication apparatus comprising:

a transmitter configured to transmit image data attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message;

a panel section configured to input a mail address of a user to the image data communication apparatus; and

a controller configured to set the mail address of the user, input by the panel section, into the mail message of the e-mail to which the image data is attached,

whereby the mail address of the user set into the mail message of the e-mail can be utilized as a destination of a reply to the e-mail, the reply being sent from the receiving apparatus.

- 17. The image data communication apparatus according to claim 16, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
- 18. An image data communication apparatus connected to a network, the image data communication apparatus comprising:

a transmitter configured to transmit image data attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message;

a panel section configured to input a mail address of a user to the image data communication apparatus; and

a controller configured to set the mail address of the user, input by the panel section, into the mail message of the e-mail to which the image data is attached, whereby a replay to the e-mail can be sent to the user without requiring input of the mail address of the user at the receiving apparatus, the reply being sent from the receiving apparatus.

- 19. The image data communication apparatus according to claim 18, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
- 20. An image data communication apparatus connected to a network, the image data communication apparatus comprising:

a transmitter configured to transmit image data attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message;

a panel section configured to input a mail address of a user to the image data communication apparatus; and

a controller configured to set the mail address of the user, input by the panel section, into the mail message of the e-mail to which the image data is attached, whereby a reply to the e-mail is returned to the mail address of the user.

- 21. The image data communication apparatus according to claim 20, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
- 22. A method for controlling an image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message, the method comprising:

inputting a mail address of a user to the image data communication apparatus; and

setting the input mail address of the user into the mail message of the e-mail to which the image data is attached, whereby the mail address of the user set into the mail message of the e-mail can be utilized as a destination of a reply to the e-mail, the reply being sent from the receiving apparatus.

- 23. The method according to claim 22, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
- 24. A method for controlling an image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message, the method comprising:

inputting a mail address of a user to the image data communication apparatus; and

setting the input mail address of the user into the mail message of the e-mail to which the image data is attached, whereby a reply to the e-mail can be sent to the user without requiring input of the mail address of the user at the receiving apparatus, the reply being sent from the receiving apparatus.

- 25. The method according to claim 24, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
- 26. A method for controlling an image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message, the method comprising:

inputting a mail address of a user to the image data communication apparatus; and

setting the input mail address of the user into the mail message of the e-mail to which the image data is attached, whereby a reply to the e-mail is returned to the mail address of the user.

- 27. The method according to claim 26, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
- 28. A method for controlling an image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail, the e-mail including a mail from command and a mail message, the method comprising:

inputting a mail address of a user to the image data communication apparatus;

setting the input mail address of the user into the mail message of the e-mail to which the image data is attached, whereby the mail address of the user set into

the mail message of the e-mail can be utilized as a destination of a reply to the e-mail, the reply being sent from the receiving apparatus; and

transmitting the image data attached to the e-mail to a receiving apparatus via the network.

- 29. The method according to claim 28, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
- 30. A method for controlling an image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail, the e-mail including a mail from command and a mail message, the method comprising:

inputting a mail address of a user to the image data communication apparatus;

setting the input mail address of the user into the mail message of the e-mail to which the image data is attached, whereby a replay to the e-mail can be sent to the user without requiring input of the mail address of the user, the reply being sent from the receiving apparatus; and

transmitting the image data attached to the e-mail to a receiving apparatus via the network.

- 31. The method according to claim 30, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
- 32. A method for controlling an image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail, the e-mail including a mail from command and a mail message, the method comprising:

inputting a mail address of a user to the image data communication apparatus;

setting the input mail address of the user into the mail message of the e-mail to which the image data is attached, whereby a reply to the e-mail is returned to the mail address of the user; and

transmitting the image data attached to the e-mail to a receiving apparatus via the network.

- 33. The method according to claim 32, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
- 34. An image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message, the image data communication apparatus comprising:

a panel section configured to input a mail address of a user to the image data communication apparatus, the user distinct from the image data communication apparatus; and

a controller configured to set the mail address of the user, input by the panel section, into the mail message of the e-mail to which the image data is attached, whereby the mail address of the user set into the mail message of the e-mail can be utilized as a destination of a reply to the e-mail, the reply being sent from the receiving apparatus.

35. A method for controlling an image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message, the method comprising:

inputting a mail address of a user to the image data communication apparatus, the user distinct from the communication apparatus; and

setting the input mail address of the user into the mail message of the e-mail to which the image data is attached, whereby the mail address of the user set into the mail message of the e-mail can be utilized as a destination of a reply to the e-mail, the reply being sent from the receiving apparatus.
